- Firebase

Experience

July 2022 - ONGOING

Company: SkySoft - Syrmia

Zen project

Zen is TV application with a focus on broadcasting sport, anime, movie and music content. The application is in the initial phase and should be similar to the Netflix application. App uses the *Norigin Spatial Navigation* library, because application requires key navigation (remote navigation for browser based smart TVs).

Technologies: **React**

January 2021- July 2022

Company: SkySoft - Syrmia

True TV

TrueTV is one of the Asia leading digital networks with a focus on broadcasting sport, anime, movie and music content. Application is made for *webOS* and *Tizen* TV platforms. It contains a login form, a video player, where video content can be rewound, paused, saved to favorites and can insert translations into video contents. Also, the application contains notifications for the users, option to pay for watching premium content in app and various other possibilities.

Technologies: **React**.

October 2019 – January 2021

Company: SkySoft

Algreen

Algreen is web application for retail. It helps with managing products, their transfers, purchases and sales. The site also allows the user to calculate workers' wages by uploading an Excel file with workers' hourly rates. The user can print invoices and salary calculations. The site is connected to the *eFaktrue* portal, and therefore enables the printing of bills with a QR code. *Algreen* also uses *Chart.js* to track the company's progress and *DataTables* (plug-in for the *jQuery Javascript* library) that adds advanced features to any HTML table.

Technologies: **Laravel, jQuery**.

July 2020 – November 2020

Company: SkySoft

Door configurator

Door configurator is application for users to visually design their doors. Starting with choosing model and size, to adding spy holes, door handles, glasses, etc. After creating door with desired shape and dimensions, the user can send the form with the door data to the store.

Technologies: **Laravel, jQuery**.

February 2020 – July 2020

Company: SkySoft

The best life deal

TBLD is web application made for those who want to live healthy life. Users can correspond with other users and admin. They can get advises from the admin, fulfill various tasks and track their progress. The site uses *Intervention Image* (an open source PHP image handling and manipulation library). It provides an easier and expressive way to create, edit, and compose images

Technologies: **PHP**.

October 2019 – February 2020

Company: SkySoft

TagMyFish

TagMyFish is web application for fishermen. The site has two separate but closely related parts: the first, of a scientific-educational type, showing fish species and waters, and the second, which relies heavily on the first, and which is a social network for anglers. On social network they can chat with other fishermen, upload pictures of their catches, tag places and fishes, learn useful information about fishing.

Technologies: **WordPress, PHP**.
